## PROFESSIONAL SUMMARY

**BI Engineer** with nearly **5 years** of experience building scalable data models, ELT pipelines, and analytics solutions using **dbt, Snowflake, SQL, Python, and Airflow**. Experience across **travel, fintech, and healthcare**, with strong expertise in dimensional modeling, data quality, pipeline orchestration, and KPI development.

## TECHNOLOGIES

**Data Engineering:** ETL/ELT, Data Pipelines, Data Modeling, Data Quality, Airflow, Python, SQL

**Data Platforms & Cloud:** Snowflake, BigQuery, PostgreSQL, Microsoft Fabric, AWS, Azure, Docker, CI/CD, Git

**Analytics Engineering:** dbt, Dimensional Modeling, Star Schema, Incremental Models, Semantic Models

**Data Integration, BI & AI:** Kafka, Fivetran, Monte Carlo, Data Validation, Data Monitoring, ThoughtSpot, Power BI, Looker, Sisense, OpenAI, Claude, Gemini, Cursor

## PROFESSIONAL EXPERIENCE

### Navan

Apr 2026 – Present

*BI Engineer - Data Platform Team*

*Bangalore, India*

- Developed and maintained **dbt models** across staging, intermediate, and mart layers in **Snowflake** supporting **travel booking** and expense analytics, ensuring **GDPR-aligned data governance** & quality.
- Implemented dbt tests, source freshness checks, & validation frameworks to improve trust in datasets.
- Implemented **Airflow orchestration**, improving pipeline reliability from **82% to 99.5%** and implemented table-level monitoring, freshness checks, and alerts using **Monte Carlo**.
- Designed **dimensional data models** including fact and dimension tables supporting self-service analytics.
- Built **dbt models** for employee and manager data & partnered with the **Integrations team** to automate **Workato notifications & BO/TO YAML updates** for employee departures reducing manual maintenance.
- Built **semantic models**, automated data workflows, and implemented **dbt snapshots** to track historical changes, ensuring reliable and consistent datasets for analytics.

### Ottimate (YC-backed Fintech)

Mar 2024 – Mar 2026

*Data Analyst*

*Remote, India*

- Developed invoice parsing workflows for **digital PDFs and PNGs** across multiple vendors & invoice formats, using Python, AWS notebooks, and trained models to automate extraction of structured invoice data.
- Developed and optimized **ETL pipelines** using Azure Data Factory, Microsoft Fabric, and MySQL to process and transform cloud data, enabling **historical refreshes, improving data processing speed** and management, ensuring alignment with business targets.
- Partnered with **Operations and Product teams** to investigate recurring invoice issues & improve vendor mappings helping reduce manual intervention and improve invoice processing reliability.
- **Mentored junior** and troubleshooting data issues, while reviewing their work and providing technical guidance.

### Spikewell Pvt Ltd

Feb 2022 – Dec 2023

*Software Development Engineer - Data*

*Bhubaneswar, India*

- Designed dimensional data models and analytical datasets for **healthcare and enterprise clients**, integrating data from **Cerner** and **HL7** systems for downstream analytics.
- Transformed and standardized **healthcare records** using SQL and data validation workflows, improving data quality and consistency across analytical datasets.
- Optimized SQL transformations through query tuning, indexing, and efficient join strategies, improving data processing and reporting performance across **20+ analytical reports**.

## EDUCATION

### National Institute of Science & Technology, Odisha

2018 – 2022

Bachelor of Technology in Computer Science Engineering

## PROJECTS

### Real-Time Stock Market Data Pipeline

[GitHub](#)

- Built an end-to-end **real-time data pipeline** using **Python, Kafka, and MinIO** to ingest and stream live stock market data into **Snowflake**; developed **dbt staging, intermediate, & mart models** for analytics-ready datasets.
